

TELEMEDIA

**LEADERS IN BROADCAST AND
COMMUNICATIONS SOLUTIONS**

SATELLITE AND TELEPORT

Connecting Africa - Telemedia hosts one of the continent's largest privately owned and carrier neutral teleports and provides broadcast facilities, satellite, communication, and fibre connectivity to our clients.

Our uplink and downlink services are registered with leading satellite operators and enable us to connect Africa to the world and provide clients with complete coverage of the Continent.

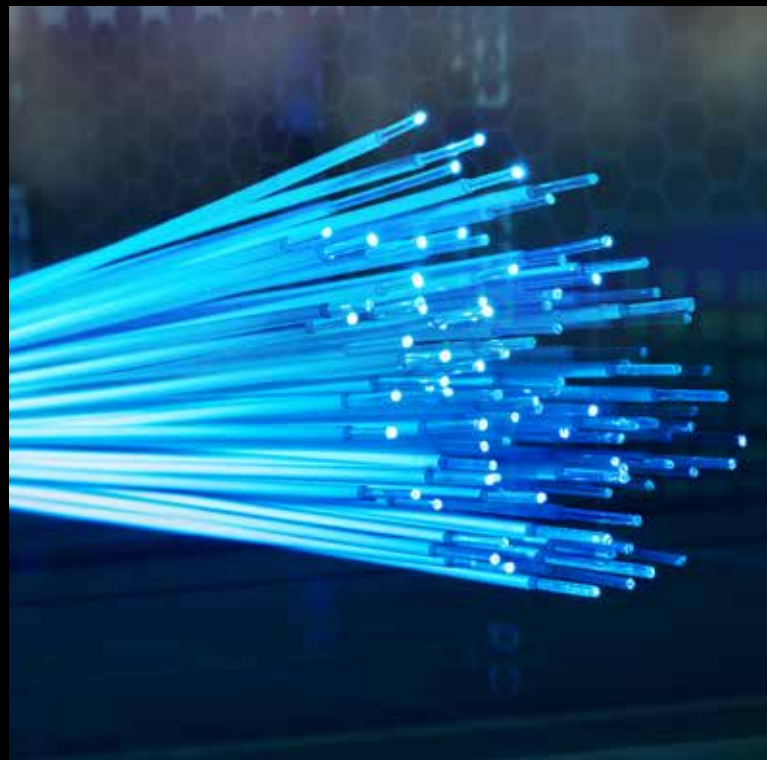

Telemedia's MCR sports the latest monitoring and routing equipment that is capable of managing multiple video feeds. Our dish farm contains fixed and steerable dishes which includes 42 C-Band and Ku-Band up to 9.3 metre in diameter.

FIBRE NETWORK

Telemedia has its own Fibre Optic network in Johannesburg. This network can deliver IP data, encoded TSolP, and uncompressed HD video signals. Our clients include all the major broadcasters in the country.

Telemedia's video network implements the latest SMPTE standards to transport uncompressed and compressed video signals over IP. Our network is self-managed with a capacity of up to 80Gbit/s.

The network extends both nationally and internationally using dedicated leased lines from all major telecommunication companies and internet transit providers. Our fibre network is supplemented with our VSAT network which provides access to hard-to-reach locations and mitigates any unexpected cable breaks.

BROADCAST SOLUTIONS

Telemedia specialises in complete Radio and Television Broadcasting projects throughout Africa, with over 40 years' experience.

From studio builds to equipment sales and outside broadcasting solutions Telemedia has the expertise to develop turnkey solutions for clients.

Telemedia is a registered vendor for major international suppliers enabling us to design bespoke solutions using the latest technologies in the industry.

We offer both purchase and rental options of communications equipment, including satellite and cellphone bonding units which operate off the 4G and 5G networks.

STREAMING & DATA

Telemedia offers state-of-the-art broadcasting tools including video playout, cloud transcoding services and global delivery as well as privacy and security features making it stress-free to stream your virtual events to any device. We have a solution for every broadcast whether it is a concert, webinar, conference, or sporting event.

Our multiple data centres offer affordable solutions for storage at competitive rates for our clients.

AI SPORTS COVERAGE

Telemedia partnered with Interactive Television Africa in 2023 to be the leading provider of AI automated sports coverage across Africa. Together our AI cameras, software, and OTT services dramatically reduce the costs of production while also making it possible to stream and broadcast previously non-broadcast local sporting codes to larger audiences.

This offering makes it possible to unlock the value of local leagues, matches and games at a fraction of the cost of traditional media delivery systems.

TELEMEDIA SISTER COMPANIES ALSO OFFER CLOUD STORAGE, MEDIA MONITORING, ANALYTICS AND HIGH QUALITY PRODUCTION SERVICES.
